CUSTOM CUTTING

Elitron's cutting solution Kombo TH is now ready to reach new heights in productivity and smart workflow management. It is now possible to work using 1 working area (3150 x 2050 mm) or divide the 3150mm width into 2 separate customized working areas, each with an independent gantry and cutting head.

No more halted production, even when samples are required or there's a complex production!

FLEXIBLE INDUSTRIAL FINISHING

- 2 cutting heads in 1 cutting system;
- 2 working areas in 1 cutting system;
- 2 vacuum areas in 1 cutting system - 40 sectors in total.

Custom cutting area width

Possibility to divide width of 3150mm into 2 customized independent areas where the automatic 40-sector vacuum system proportionally divides the sectors between the 2 customized working areas.

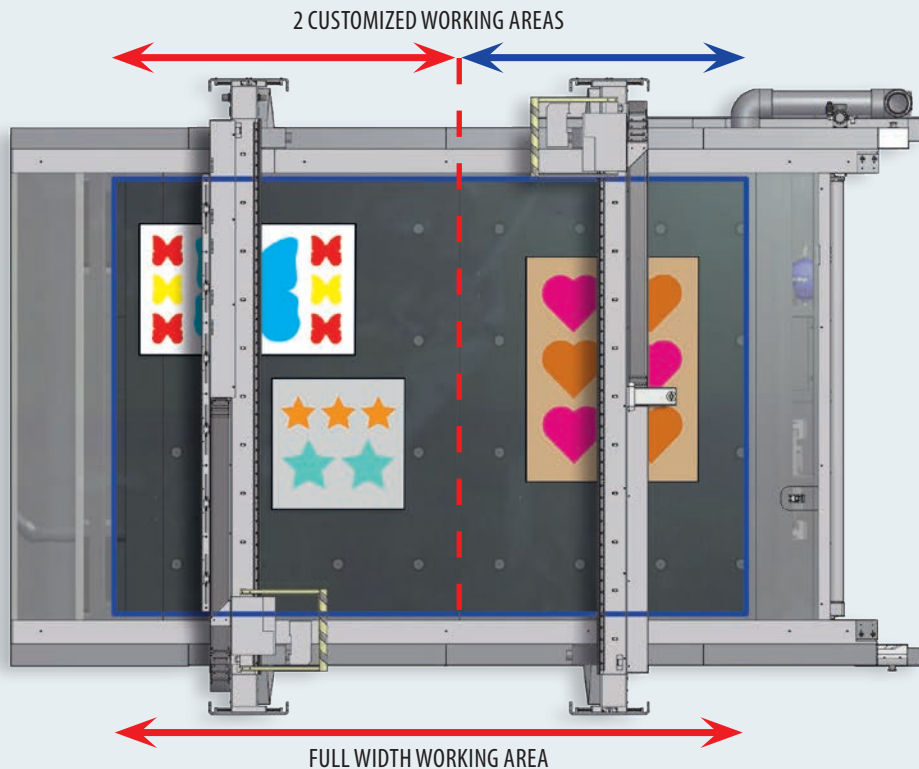

Multi Material workflow

2+ materials can be worked in each independent area so that different jobs or applications can be carried out simultaneously.

Non stop production

Machine idle times are inexistent, as both cutting areas can work at the same time, in parallel or alternately, doing different jobs and cutting different media.
